Re: Hydrotest Inspection

Dear Landowner:

Marathon Pipe Line (MPL) periodically conducts testing to ensure the safe and environmentally sound operation of our pipelines. Our records indicate that you own or occupy land in the proximity of an MPL operated pipeline that will be undergoing a hydrotest inspection.

We are anticipating the pipeline will fill with water starting on _____ with the hydrotest beginning at 7:00 a.m. on _____ and finishing by _____ at 7:00 p.m.

The enclosed fact sheet describes the test and provides information helpful to you should you have any questions.

Please take a minute to review the fact sheet as it provides important information about:

- Testing Procedures
- Pipeline Location
- Safety Steps (Please avoid the right of way during the test)
- Test Monitoring
- Steps to Take if You Notice Water (Please notify us @ 1-800-537-6644)

MPL is committed to protecting the safety of the community and environment and safely operating its pipelines. For additional information, please visit MPL's website at www.marathonpipeline.com.

Additionally, MPL takes great pride in the relationships we have built on trust with our many landowners and communities in which we live and work. It is our goal to maintain good relations with all of our neighbors, working with them in a fair and responsive manner. Please email MPL at landowners@marathonpetroleum.com or call 1-855-888-8056, if you have any questions or concerns. If you have received this communication by mistake or your address has changed, please let us know so that we can update our records accordingly.

Sincerely,

Aron D. Velasquez
Right-of-Way Supervisor

Hydrostatic Testing Fact Sheet

Marathon Pipe Line LLC

Contacting People Involved

Marathon Pipe Line is contacting landowners along the pipeline right of way prior to pipeline testing in their area.

Test Procedure

Water will be placed in the pipeline under controlled conditions. Pumps will then add additional water to pressure test the pipe for a specified period of time.

Purpose of the Test

The test is intended to assure safe and environmentally sound operation of our pipelines. This is important to us, and we know it is important to you.

Location of the Pipeline

The pipeline varies in depth, although it is normally three feet underground along the pipeline right of way. Special signs may be posted at pipeline road crossings during the test.

For Your Safety, Avoid the Right-of-Way Area

It is a good idea for you to avoid the pipeline right of way during the test. Although it is a rare occurrence, a sudden release of water pressure from the pipe is possible. This can create a pool of water on the ground that may conceal a hole that could be a hazard. Our work crews will be in the area with equipment to address any situation that may arise. We appreciate your caution and understanding.

Monitoring the Test

Marathon Pipe Line will have staff monitoring the test at all times. Pipeline clean-up crews will be on duty for immediate response.

Steps to Take if You Notice Water

Since the line is being tested with water, you could notice an unusual occurrence of water on or near the pipeline during our test. Follow the standard procedures for contacting Marathon Pipe Line if you notice a water leak and no Marathon Pipe Line personnel are nearby. Call 1-800-537-6644 to report the water leak. Again, please do not go near the leak. The water could be concealing a hole where the leak occurred. Marathon Pipe Line staff will respond immediately to repair the pipe and clean up the area.

Questions?

Please call Marathon Pipe Line LLC if you have any questions regarding the testing of our pipeline. We take every precaution to ensure your wellbeing, the safe operation of our pipeline, and safety of the environment.
